

Fund Description

The Teucrium Soybean Fund provides investors unleveraged direct exposure to soybeans without the need for a futures account. SOYB, as a result of the soybean futures it holds, has been specifically designed to mitigate the impacts of contango and backwardation.

Why SOYB?

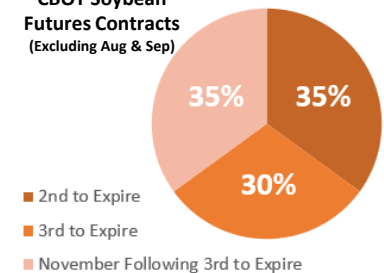

- **Rising world population** is increasing demand for soybeans and soybean products while decreasing amounts of arable land for crops
- **China's soybean imports** are rising sharply due to increasing consumption of pork, poultry and farm raised fish which are all primarily fed soybeans¹
- **World soybean trade** is projected to continue to grow over the next decade, climbing nearly 30% by 2027/28¹
- **Soybean harvests are highly unpredictable** subject to heat, flooding, drought and pestilence, all of which can contribute to crop failure
- **Liquid exchange traded security** with low correlation coefficient to the S&P 500

THE PERFORMANCE QUOTED REPRESENTS PAST PERFORMANCE, DOES NOT GUARANTEE FUTURE RESULTS AND CURRENT PERFORMANCE MAY BE LOWER OR HIGHER THAN THE DATA QUOTED.

Fund Objective

The investment objective of the Fund is to have the daily changes in percentage terms of the Shares' Net Asset Value ("NAV") reflect the daily changes in percentage terms of a weighted average of the closing settlement prices for three futures contracts for soybeans ("Soybean Futures Contracts") that are traded on the Chicago Board of Trade ("CBOT"), specifically (1) the second-to-expire CBOT Soybean Futures Contract (excluding August & September), weighted 35%, (2) the third-to-expire CBOT Soybean Futures Contract (excluding August & September), weighted 30%, and (3) the CBOT Soybean Futures Contract expiring in the November following the expiration of the third-to-expire contract, weighted 35%.

Fund Structure

The Teucrium Soybean Fund is a commodity pool that will issue Shares that may be purchased and sold on the NYSE Arca. The Fund is a series of the Teucrium Commodity Trust ("Trust"), a Delaware statutory trust. Additional series of the Trust that will be separate commodity pools may be created in the future. The Trust and the Fund operate pursuant to the Trust's Third Amended and restated Declaration of Trust and Trust Agreement (the "Trust Agreement"). The Fund was formed and is managed and controlled by the Sponsor, Teucrium Trading, LLC. The Sponsor, a limited liability company formed in Delaware, is registered as a commodity pool operator ("CPO") with the Commodities Futures trading Commission ("CFTC") and is a member of the NFA. The Sponsor registered as a Commodity Trading Advisor ("CTA") with the CFTC effective September 8, 2017.

[^]The benchmark is TSOYB which is defined on page 2. The Benchmark reflects the futures values based on the CBOT prices, and is as reported by the New York Stock Exchange (NYSE). The Market Price used herein is the actual 4pm close price as reported by the NYSE.

Definitions

Backwardation: A market condition in which a futures price is lower in the distant delivery months than in the near delivery months.

Raw Beta: The sensitivity measure that estimates the percentage price change of security given a 1% change in a representative market index. Raw beta measures the risk of a security relative to the market (represented by an index).

Chicago Board of Trade (CBOT): A commodity exchange established in 1848 that today trades in both agricultural and financial contracts. The CBOT originally traded only agricultural commodities. Now, the CBOT offers options and futures contracts on a wide range of products including metal, U.S. T-Bonds and energy.

Contango: A condition in which distant delivery prices for futures exceed spot prices, often due to the costs of storing and insuring the underlying commodity. Opposite of backwardation.

Correlation: A measure of how two securities move in the market in relation to one another, i.e.; in tandem or inversely. Correlation is represented by the correlation coefficient, which ranges between -1 and +1. A positive correlation coefficient of +1 implies that as one security moves, either up or down, the other security will move in the same direction. A negative correlation coefficient of -1 implies that if one security moves in one direction the other security moves in the opposite direction. A correlation of 0 means that the movements of the securities are not correlated.

Expense Ratio: Defined as the amount of income (loss) required for the redemption value at the end of one year to equal the selling price of the Share, as presented in the Form S-1 dated April 29, 2019.

Intraday Indicative Value (IIV): An Intraday Indicative Value is published by NYSE Alternext US for each Exchange Traded Product (ETP) as a reference value to be used in conjunction with other ETP market information.

Market Price: The current price at which shares are bought and sold. Market returns are based upon the last trade price.

NAV: The dollar value of a single share, based on the value of the underlying assets of the fund minus its liabilities, divided by the number of shares outstanding. Calculated at the end of each business day.

Roll: When an investor replaces an existing futures position with a new one having a later expiration date.

S&P 500: SPX Index - An investment cannot be made directly in an index. Stocks in this example are represented by the Standard & Poor's 500, which is an unmanaged group of securities and considered to be representative of the stock market in general.

Spot: The futures contract month nearest expiration and delivery month for futures contracts.

Teucrium Soybean (TSOYB) Index: A weighted average of daily changes in the closing settlement prices of (1) the second-to-expire Soybean Futures Contract traded on the CBOT (excluding August & September), weighted 35%, (2) the third-to-expire CBOT Soybean Futures Contract (excluding August & September), weighted 30%, and (3) the CBOT Soybean Futures Contract expiring in the November following the expiration month of third-to-expire contract, weighted 35%. To convert to an index, 100 is set to \$25, the opening day price of SOYB.

Risks and Disclosure

• *Commodities and futures generally are volatile, and instruments whose underlying investments include commodities and futures are not suitable for all investors.*

• *This material must be preceded or accompanied by a prospectus. Please read the prospectus carefully before investing. To obtain a current prospectus visit the link below:*

<http://www.teucriumsoybfund.com/pdfs/soyb-prospectus.pdf>

• *The Fund is not a mutual fund or any other type of investment company within the meaning of the Investment Company Act of 1940, as amended, and is not subject to regulation thereunder.*

• *Because the Fund will invest primarily in soybean futures contracts and other derivative instruments based on the price of soybeans, an investment in the Fund will subject the investor to the risks of the soybean market, and this could result in substantial fluctuations in the price of the Fund's shares.*

• *Shares of the Fund are not insured by the Federal Deposit Insurance Corporation ("FDIC"), may lose value and have no bank guarantee.*

• *Unlike mutual funds, the Fund generally will not distribute dividends to its shareholders. Investors may choose to use the Fund as a means of investing indirectly in soybean, and there are risks involved in such investments.*

• *Prior to the launch of the Teucrium Corn Fund, Teucrium Trading, LLC had never operated a commodity pool. Investors may choose to use the Fund as a vehicle to hedge against the risk of loss, and there are risks involved in such hedging activities.*

• *This material is not an offer or solicitation of any kind to buy or sell any securities outside of the United States of America.*
